

Quality Policy

Frontier Smart Technologies is at the forefront in the design and development of Silicon and Modules for both DAB Radio and Connected Audio products. We supply and support both large and small companies with Silicon, Modules and Software allowing them to manufacture a wide range of DAB and Connected Audio Products that are sold throughout the world.

We recognise that that we do this in a wider context and that the company works with, and has obligations to many stakeholders, such as our Customers, Staff, Shareholders, Suppliers/Subcontractors, Regulatory bodies, the community in which we work, and others. This context shapes what we do and how we do it.

We commit to meet both our business objectives and both our internal and external commitments, obligation and requirements to our stakeholders, including Commercial, Technical and Statutory/Regulatory requirements.

We commit to continual growth and improvement of the business processes that make up our Quality Management System. We will work to continually improve our Environment Management System, to ensure sustainability of the organisation, maintenance of knowledge within the organisation and ensure business continuity,

We are committed to achieve and maintain our ISO9001:2015 and ISO14001:2015 certification, through cooperation, and collaboration with all our stakeholders. This is to help ensure a consistency of approach, continual improvement and enhancing confidence and trust in our stakeholders that Frontier will deliver products and services meeting their requirements. Through this we will ensure and enhance satisfaction of both our customers and other stakeholders.

We will set Quality objectives that support this policy and the organisation's changing context and these will be reviewed on a regular basis by Senior Management

Anthony Sethill, CEO, May 2017
